

CONTENTS

	Introduction	xiii
1	Matter, Space and Time	1
1.1	Basic understanding	1
1.1.1	– Matter	1
1.1.2	– Space	1
1.1.3	– Time	1
1.1.4	– Perception of reality	2
1.2	Advanced understanding	3
1.2.1	– Matter	3
1.2.1.1	– <i>Quantum theories</i>	3
1.2.1.2	– <i>Fields</i>	3
1.2.1.3	– <i>Mass</i>	4
1.2.1.4	– <i>Mass energy equivalence</i>	4
1.2.1.5	– <i>The standard model</i>	4
1.2.1.6	– <i>Supersymmetry theory</i>	6
1.2.1.7	– <i>String theories</i>	6
1.2.1.8	– <i>M-Theory</i>	7
1.2.2	– Space and time	7
1.2.2.1	– <i>Einstein's space-time</i>	7
1.2.2.2	– <i>String theory's space-time</i>	7
1.2.2.3	– <i>Time dilation</i>	8
1.2.2.4	– <i>Unit of time</i>	8
1.2.2.5	– <i>Demise of the ether</i>	8
1.3	Incompatible theories	8
1.4	Theory foundations – roots	9
1.4.1	– Wisp theory roots/history	11

CONTENTS

2	Symmetry	13
2.1	Symmetry	13
2.2	Face-centred cubic lattice	14
2.3	Spherical sphere packing	14
2.4	Symmetry-breaking	16
2.5	Antimatter	18
2.6	Subatomic particles	18
3	Fractals	21
3.1	Fractal patterns	21
3.1.1	– Cantor dust	21
3.1.2	– Binary tree	24
3.2	Particle fractals – ‘matter-fractals’	24
4	Wisp Space	25
4.1	Wisp space’s structure	25
4.1.1	– States of space	25
4.1.2	– Wisps	26
4.1.3	– Matter-fractals	26
4.2	Early ether theories	29
4.2.1	– René Descartes	29
4.2.2	– James Clerk Maxwell	29
4.2.3	– J.J. Thomson	30
4.2.4	– Michelson and Morley	30
4.2.5	– Insufficient proof	30
4.3	Waves in wisp space	31
4.3.1	– Transverse waves	32
4.3.2	– Longitudinal waves	32
4.3.3	– EPR Paradox	33

4.4	Matter-fractal's motion through wisp space	34
4.5	Absolute frames of reference	35
4.5.1	– Local absolute frames of reference	35
4.6	Newton's laws of motion	36
4.6.1	– Newton's first law of motion	36
4.6.2	– Newton's second law of motion	36
4.6.3	– Newton's third law of motion	37
5	Gravity	39
5.1	The weakest force	39
5.2	Current theories	40
5.2.1	– Newton's law of gravitation	40
5.2.2	– Einstein's general theory of relativity	41
5.2.3	– Other theories	42
5.3	Wisp theory of gravitation	43
5.3.1	– Curved wisp space	44
5.3.2	– Tension and compression forces	45
5.3.3	– Force and the inverse-square law	47
5.3.4	– Why obey the inverse-square law?	49
5.3.5	– Newton's thoughts	50
5.3.6	– Wisp gravitational force	52
5.3.7	– Zero-state space shock waves	53
5.3.8	– Calculating gravitational acceleration	55
5.3.9	– Bending Light	59
5.4	Podkletnov's experiments	60
5.4.1	– Gravity shielding	60
5.4.2	– Impulse gravity generator	62
5.5	Quantum gravitational effects	64
5.6	Pioneers' orbital discrepancies	64
5.7	Gravity Probe B	66
5.8	Conclusion	66

6	Electromagnetic Force	69
6.1	Electric force	69
6.2	Magnetic force	70
6.3	Light	72
6.3.1	– Zero rest mass	74
7	Wisp and Special Relativity:	
	Fundamentals	75
7.1	Postulates and implications of special relativity	76
7.1.1	– Postulate 1: principle of relativity	76
7.1.2	– Postulate 2: absoluteness of the speed of light .	76
7.1.3	– Implications of postulate 1	76
7.1.4	– Implications of postulate 2	78
7.2	The principles of wisp relativity	79
7.2.1	– Principle 1 Laws are different	79
7.2.2	– Principle 2 Absolute speeds are constant	79
7.2.3	– Principle 3 Dilation factor	79
7.2.4	– Principle 4 Jiggle dilation	80
7.2.5	– Principle 5 Force and time dilations	80
7.3	Measurements: absolute and relative	80
7.3.1	– Absolute measurements	80
7.3.2	– Relative measurements	81
7.4	Events	82
7.5	Absolute measurements of light’s relative speed .	82
7.5.1	– Absolute measurements in a stationary frame .	84
7.5.2	– Absolute measurements in a moving frame . . .	84

7.6	Dilation factors	89
7.6.1	– Time dilation: light-pulse clocks	89
7.6.2	– Force dilation	91
7.6.3	– Jiggle dilation	92
7.6.4	– Time dilation: mechanical/biological clocks	94
7.7	The Michelson-Morley experiment	96
7.7.1	– One-way light speed test	99
7.8	Kennedy-Thorndike experiment	100
7.9	Stellar aberration	100
7.10	Fizeau’s experiment	101
7.11	Wisp coordinate and frame velocity transformations	102
7.11.1	– Wisp frame velocity transformation	103
7.12	Invariance of distance	105
7.13	Absolute simultaneity: events	105
7.14	Mass invariance	108
7.14.1	– Relativistic mass increase: quasi-mass	108
7.14.2	– Accelerating subatomic particles	109
7.14.3	– Decelerating subatomic particles	111
7.15	Wisp accelerations and transformations	111
7.15.1	– Particle accelerator force magnitudes	112
7.15.2	– Wisp acceleration transformations	113
7.15.3	– Motion produced by a force-device in absolute frame S	115
7.15.3.1	– Motion produced by a force-device moving in frame S	117
7.15.4	– Rules for time dilation compensation	119
7.15.4.1	– Motion produced by a moving force-device with respect to frame S'	121
7.16	Absolute speed of light	124
7.17	Earth’s absolute and relative times	125

**8 Wisp and Special Relativity:
Electrodynamics**127

8.1 Electrodynamics of moving bodies129

8.2 Force measurements in different frames129

8.2.1 – Electromagnetic force in absolute frame S129

8.2.2 – Electromagnetic force in moving frame S'130

8.2.3 – Electric force on wire moving through
wisp space133

8.3 Ether re-established135

**9 Wisp and Special Relativity:
Doppler Effect**137

9.1 The Doppler effect of light137

9.1.1 – Light source device139

9.2 Doppler effect:139

9.2.1 – transverse observer motion139

9.2.2 – transverse source motion141

9.2.3 – transverse Doppler effect experiments141

9.2.4 – testing a moving
observer’s transverse Doppler effect143

9.2.5 – observer receding from a stationary source ...143

9.2.6 – observer approaching a stationary source146

9.2.7 – source moving and observer stationary146

9.3 Doppler effect – general motion:
observer and source moving147

10	Wisp and Special Relativity: Relativistic Mechanics	151
10.1	Conservation of momentum	151
10.2	$E = mc^2$	155
10.2.1	– Energy into mass	158
10.3	Conservation of charge	159
11	Big Bang	161
11.1	Black holes	161
11.1.1	– General relativity	161
11.1.2	– Points of singularity	163
11.1.3	– Supermassive black holes	163
11.1.4	– Ultra-supermassive black hole	163
11.2	COBE (launched 1989)	164
11.3	Wisp big bang theory	164
11.3.1	– Inflation	165
11.3.2	– Redshift	165
11.3.3	– Galaxy formation	166
11.3.4	– Star speeds in rotating galaxies	166
11.3.5	– The big crunch	167

Appendices

A Wisp versus Special Relativity Test .169

A.1 – Transverse Doppler effect experiment169

A.2 – Initial data170

A.3 – Special relativity’s formula170

A.4 – Wisp theory’s formula173

A.5 – Comparison173

A.6 – Analysing data174

B Fizeau’s Experiment177

B.1 – Apparatus177

B.2 – Theory180

B.3 – Applying wisp theory to SR’s formula181

B.4 – Applying wisp theory to Fresnel’s formula . . .184

B.5 – Conclusion184

A-Z Index185
